Company overview

The company was founded by David Doyle in 1972 – the company focused initially on constructing farm buildings and have grown to become of Ireland’s top suppliers of Readymix Concrete and Easyflow Concrete Mix. These farm buildings play a vital role in the management and production of food. They consist of buildings for animal husbandry and the processing of food crops. The construction of farm buildings requires several basic materials, one of them being Concrete or Concrete Mix, for foundations, milking parlours, cattle slats, silage pits, farm roadways etc.
Building a house
Ready mix concrete

Doyle Concrete, have been delivering Ready Mixed Concrete in the South Kilkenny, Waterford and Tipperary regions, for almost a quarter of a century. You can be assured of friendly service, expert advice and prompt attention to your requirements.

Our in-house team are experienced to process your requirements, from your initial enquiry to delivering your concrete on time, and to the highest EU Standards reflected in our compliance with EN 206.

Depending on your requirements, and other factors such as quantities, access to your site, and which type of concrete you order, we usually deliver to you the day after you order from us.

The best way to get an accurate delivery time is to give us a call on – 056 7768 650
Pre cast products

The main difference between this and pre-cast, is that, the steel rods which make up the reinforcing grid are under tension, and just at the right moment when the concrete is at critical point of setting, the tension is released. The result is that the steel rods try to contract to their normal state of tension thus increasing the overall strength of the concrete slab.
Floor Screed

Doyle Concrete supply and deliver floor screed, which is a relatively new concept. The concrete is self-levelling and self compacting, saving time and energy. This type of concrete can be delivered by pump at any stage of the build even after the build is complete.

- Supply and lay by Doyle Concrete
- For indoor – hard to reach places
- Ideal for underfloor heating systems and multi-story use
- Minimises heat loss compared to conventional concrete system
- Self compacting – no need for vibrating equipemnt
- No need for power floating
- Self levelling using laser levels – no need for screed work
- Eliminates uneven floors prir to tiling and timber floor laying
- Takes half the time of conventional concrete work
- Domestic, industrial and commercial use
- Fast, efficient and very cost effective
Concrete pumping service

We offer a complete Concrete Pumping Service for the commercial and residential markets. Our employees and equipment have been used on major construction sites throughout the Country.
Conveyor/extendable chutes

We offer a Concrete Conveyor Hire service for concrete placement. This is an ideal solution for customers when handling Readymix in difficult areas. Contact Doyle Concrete to choose the best system for your construction site. All our Conveyor Hire machines confirm to the latest health and safety standards.
Sand and gravel

Doyle Concrete run their own Sand / Gravel pit in Castledermot in Kildare. It is from there we can supply you with sand, and gravel. The gravel and aggregates can be supplied in several different grades, and once again our in-house team will be happy to advise on types, grading and delivery.
Pre stressed flooring

The main difference between Prestressed Concrete Flooring and Precast Concrete Flooring, is that, the steel rods which make up the reinforcing grid are under tension, and just at the right moment when the concrete is at critical point of setting, the tension is released. The result is that the steel rods try to contract to their normal state of tension thus increasing the overall strength of the concrete slab.

Prestressed Concrete Flooring make it possible to use long spans. The advantage of this is that it adds flexibility to the design of floor plans as restricting load-bearing structures can be far apart. Prestressed Concrete Floors have another advantage in that inexpensive materials for many partition walls may be used, which do not have to be load-bearing. Prestressed Concrete Floors provide further advantages mainly around cost-effectiveness.
Concrete stairs – as a specialised product in itself, Doyle Concrete is an expert in supplying concrete stairs for first floor houses and premises. We can supply you with standard stairs, but also we can make them exactly to your requirements. Doyle concrete can provide you with concrete stairs in standard cast and also in cast prepared onsite.
We also do do do

- Cattle slat (see our farming PDF download for full details and sizes)
- Rubber slats
